Damian Ivereigh

October 1998 **Linux Journal****Publisher:** Specialized Systems Consultants, Inc.Full text available: [html\(40.10 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Cisco runs a redundant system of 50 print servers using Linux, Samba and Netatalk. It prints to approximately 1,600 printers worldwide, serving 10,000 UNIX and Windows 95 users, some of whom are in mission-critical environments

2 [High availability & performance: WS-replication: a framework for highly available web services](#)

Jorge Salas, Francisco Perez-Sorrosal, Marta Patiño-Martínez, Ricardo Jiménez-Peris

May 2006 **Proceedings of the 15th international conference on World Wide Web****WWW '06****Publisher:** ACM PressFull text available: [pdf\(3.13 MB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [cited by](#), [index terms](#)

Due to the rapid acceptance of web services and its fast spreading, a number of mission-critical systems will be deployed as web services in next years. The availability of those systems must be guaranteed in case of failures and network disconnections. An example of web services for which availability will be a crucial issue are those belonging to coordination web service infrastructure, such as web services for transactional coordination (e.g., WS-CAF and WS-Transaction). These services should ...

Keywords: WS-CAF, availability, group communication, transactions, web services3 [Session 3: A type system extension for middleware interactions](#)

Sven De Labey, Eric Steegmans

March 2007 **Proceedings of the 1st workshop on Middleware-application interaction: in conjunction with Euro-Sys 2007 MAI '07****Publisher:** ACM PressFull text available: [pdf\(462.32 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Object-oriented programming languages such as Java provides inadequate support for advanced method invocation strategies in distributed applications. Invocation semantics such as *reliable unicast* and *multicast* must be implemented based on primitive, unreliable

unicast mechanisms such as Java RMI and Socket communication. This forces developers to devise ad hoc communication strategies, which is a repetitive and error-prone process. Moreover, these communication strategies are en ...

Keywords: fault tolerance, group method invocation, type qualifier, type system

→ 4 Cluster-based scalable network services ☐

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

6 Supporting package software documentation: options for user services groups ☐

John B. McKee

December 1987 **Proceedings of the 15th annual ACM SIGUCCS conference on User Services SIGUCCS '87**

Publisher: ACM Press

Full text available:  pdf(403.17 KB)

Additional Information: [full citation](#), [abstract](#), [index terms](#)

In this presentation, I wish only to encourage a thoughtful use of software package documentation by User Service Groups (hereafter USGs). I do not wish to give specific advice. USGs vary enormously in many ways, including size, available resources, span of control, and types of software supported. What is good advice for one is bound to be bad advice for several others. After hearing about the aims of package documentation and the options for implementing them in an overall USG strategy, a ...
